**1.Install FileZilla Server on your Windows machine, create a user account, and set up a shared folder for FTP access.**

**2.Use FileZilla Client to connect to your FTP server using the credentials you created, and upload any image file from your computer to the shared folder.**

**3.Download the uploaded file from your FTP server to a different folder on your computer using FileZilla Client, and verify the file size matches the original.**

**4.Research and list 3 real-world scenarios where SNMP is used in network management for apps or services you use (such as ISPs, campus WiFi, or large websites).<br><br>Hint: Think about how network admins monitor device health, bandwidth, or uptime.**

- **Internet Service Provider (ISP):** ISPs use SNMP to monitor routers, switches, and network links. It helps administrators check bandwidth usage, device health, and network uptime so internet services remain available.

- **College or campus WiFi:** Universities use SNMP to monitor WiFi access points across classrooms, libraries, and hostels. It helps detect offline devices, weak signals, and overloaded access points.

- **Large websites and cloud services (Google, Amazon, Instagram):** Data centers use SNMP to monitor servers, network switches, and load balancers. It helps track CPU usage, memory usage, network traffic, and device uptime to prevent service interruptions.

**5.Create a table comparing FTP and HTTP across at least 5 points: port number, security, data transfer method, use cases, and authentication.**

## Comparison of FTP and HTTP

| Feature | FTP (File Transfer Protocol) | HTTP (HyperText Transfer Protocol) |
|---|---|---|
| Port Number | Uses Port 21 (control connection) | Uses Port 80 |
| Security | Not encrypted by default | Not encrypted by default (HTTPS uses encryption) |
| Data Transfer Method | Transfers files between a client and a server | Transfers web pages and other web resources |
| Use Cases | Uploading/downloading files, website hosting, backups | Browsing websites, accessing web applications, APIs |
| Authentication | Usually requires a username and password | May allow anonymous access; login is optional depending on the website |
